

SCIENCE+INSIGHT

April 9, 2024

Recent formulation changes in available Uva Ursi natural agent has resulted in decreased in-vitro (testing in the laboratory) activity to patient bacterial organisms. In-vitro activity of natural agents will vary based upon the chemical composition of the natural agent which is dependent upon factors including but not limited to, species variability, soil content, pH, and weather patterns.

Doctor's Data, Inc. will reinstate the testing and reporting of Uva Ursi starting with specimens received on 4/8/2024.
